Do you know how much sugar you drink?

We often do not think about how much sugar we get from what we drink. Sugary drinks don’t fill us up as quickly as food does, so it’s easy to take in more than we need.

On some days, sugary drinks are hard to avoid. Here are some tips to help you:

- Look closely at the serving size and choose an 8 oz can over a 20 oz bottle. Many sugary drinks are more than one serving!
- Don’t go for free refills at restaurants
- Water down soda and juices with seltzer water

Added sugar can go by many different names. Check the label on your drink for these hidden sugars.

- High-fructose corn syrup
- Fruit juice concentrates
- Honey
- Agave
- Cane Sugar
- Any other kind of “syrup” (malt, brown rice, barley, corn, etc.)
- Generally anything that ends in “-ose” (dextrose, lactose, glucose, sucrose, etc.)

Quick Tips

- Give water a try!
- Try sparkling water with natural flavors
- Try unflavored seltzer water with a slice of lemon and a splash of 100% fruit juice
- Try unsweetened iced tea with lemon slices
- Try drinking your coffee black or with a little milk
- Try a small, unflavored café latte
